F25_3375_S1_G7_HabitHub

Date	Number of Hours	Description of work done
Sept 24th	3	Brainstorming and proposing project ideas
Sept 25th	2	Messed around with Figma and followed a couple short tutorials to get familiarized
Oct 1st	1	Drafted and prepared project proposal
Oct 5th	0.5	Finalized proposal and submitted it
Oct 14th	1.5	Got started on making the wireframe draft for the project app on Figma
Oct 22nd	1	Continued working on the wireframe and picking a color theme and choosing couple aesthetics options

Description of work done:

Over the past few weeks, I have been focusing on the initial planning and visual design aspects of our HabitHub project. I began by brainstorming and pitching different project ideas with and to Jayden until we decided on HabitHub. Once we finalized our concept, I took the lead in drafting and refining the project proposal, ensuring that it clearly explained our idea, objectives, and how it aligns with habit formation and gamified productivity.

After completing the proposal, I shifted my attention toward Figma to start developing the wireframe for our app. Since I had little prior experience with Figma, I first spent some time watching short tutorials and experimenting with its features to better understand how to use the tool effectively. Once I felt confident, I started building the wireframe draft and exploring different color palettes and UI styles that fit our app's friendly and motivating tone.

Some challenges I faced included adjusting to Figma's layout tools and maintaining design consistency across pages. I also spent time comparing multiple aesthetic options before settling a few themes that would suit Habit Hub's concept.

AI Use:

AI Tool Name	Version / Account Type	Specific Feature or Purpose
Chat GPT	GPT-5 (Free Version)	Used for drafting and refining project proposal text and improving clarity of written content.

Value Addition:
I used AI mainly for idea structuring and refining written content but ensured that the final proposal and design concepts reflected my own creativity and team's vision. The AI's output served as a base which I customized to align with our app's tone and goals.
